1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 1743

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1, 3-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Snyder.

Snyder teaches a method of improving a gradient reverse phase chromatographic separation. Initial chromatographic conditions are chosen, a sample injected and separated on the column and retention times of peaks determined (p. 272, paragraph 2-4 and Figure 8A). To improve the separation, the starting point of the gradient is increased to decrease retention time as shown in Figure 8B and described on page 272, paragraph 4 and a second chromatogram produced. Note that the claims do not require the first and second columns to be different and that the column used to produce the chromatogram meets applicant's definition of a preparative column in that it separates components (see p. 6, line 4 of instant specification). With respect to claim 16, the same set of conditions used in Figure 8B elutes each portion of the mixture containing an individual peak.

4. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Snyder.

5. The teachings of Snyder are given above.

6. Snyder fails to explicitly teach preselecting the second retention time.

7. Snyder teaches that retention times can be calculated from column parameters (p. 284-286).

Art Unit: 1743

8. It would have been obvious to calculate the retention time prior to elution in order to predict the retention time under the new conditions as taught by Snyder. With respect to the alternative rejection of claims 1, 3-21, Snyder further teaches that column length may be increased to improve column efficiency (p. 275). It would have been obvious to lengthen the column (i.e., provide a second column different from the first, if the claims were so interpreted) in order to improve column efficiency as taught by Snyder.
